

JP1000 8G/16G Udisk

Bio-Key™

JP1000 Udisk uses the world's best area/pressure type fingerprint detection sensor chip combining the most advanced fingerprint recognition technology to help you manage and protect all your account names and passwords. The Auto-login function features an easy fingerprint authentication for e-mail and other accounts login.

Also, the unique desktop encryption safe box is a convenient feature which allows you to encrypt/decrypt your important files easily.

BioSense can access and transfer large amounts of data in PC and notebook, also provides useful software and flash drive for Windows XP/Vista/7/8 . Software features include: Mobile favorites, auto-login, screen lock and partitioning tools.

Features:

- Works with wet/dry fingers
- 360 degrees any angle recognition
- Auto-login with fingerprint replaces typing in user name, account number, and/or password
- File encryption/decryption on flash drive
- Screen lock replaces old screen saver
- Fully compatible with hi-speed USB 2.0
- Hardware encryption by AES 256 bits
- Advanced fingerprint recognition technology
- Easy plug and play installation
- Repartition Tool: adjust the size of the private and public partition areas for storing data
- USB powered. No external power or battery needed
- LED indicates data transfer activity
- Driverless (for Windows® XP/Vista/7/8)
